DEF_001	TC_026	Updated username not found in System Users table after successful update	Admin - User Management	After updating the existing username from Admin to Admin_QA_Test, the application displayed a Successfully Updated confirmation message. However, searching for Admin_QA_Test in the System Users table displayed No Records Found.	1. Navigate to Admin → User Management. 2. Locate the existing Admin user. 3. Click Edit. 4. Change Username to Admin_QA_Test. 5. Click Save. 6. Search for Admin_QA_Test in the System Users table.	The updated username should be saved successfully and displayed in the System Users table.	The application displayed Successfully Updated, but searching for Admin_QA_Test returned No Records Found.	Not Assigned	Not Assigned	To Investigate	08/11/2026	Potential defect identified during testing. Root cause and persistence of the updated username have not been confirmed.
DEF_002	TC_031	Updated user record not found in System Users table after changing status to Disabled	Admin - User Management	After changing the status of the user userA to Disabled, the application displayed a Successfully Updated confirmation message. However, searching for userA with Disabled status selected displayed No Records Found.	1. Navigate to Admin → User Management. 2. Locate the user userA. 3. Click Edit. 4. Change Status to Disabled. 5. Click Save. 6. Search for userA with Disabled status selected.	The updated user record should be saved successfully and displayed in the System Users table when searching with the Disabled status filter.	The application displayed Successfully Updated, but searching for userA with Disabled status selected returned No Records Found.	Not Assigned	Not Assigned	To Investigate	08-Nov-2026	Potential defect identified during testing. The updated record could not be found during verification. Root cause has not been confirmed.
OBS_003	TC_037	Unexpected validation message displayed when Confirm Password is blank	Admin - User Management	When Confirm Password was left blank and Save was clicked, the application displayed "Passwords do not match" instead of the expected "Required" message.	1. Navigate to Admin → User Management. 2. Click Add. 3. Fill all mandatory fields except Confirm Password. 4. Enter a valid Password. 5. Click Save.	A "Required" validation message should be displayed for the Confirm Password field.	The application displayed "Passwords do not match" below the Confirm Password field.	Not Assigned	Not Assigned	To Investigate	08-Nov-2026	Unexpected validation behavior observed. Requirements need to be reviewed before confirming a defect.
