ORANGEHRM TEST PLAN

Version 1.0 | Manual Testing Project

Project Name: OrangeHRM – Admin User Management

Document Type: Test Plan

Application: OrangeHRM Open Source Demo

Testing Type: Manual Testing

Prepared By: Prasiddh

Version: 1.0

Date: 07 November 2026

1. Introduction

The purpose of this document is to define the testing approach, scope, objectives, resources, and activities required for testing the OrangeHRM application.

OrangeHRM is a Human Resource Management System (HRMS) that provides various functionalities to manage employee-related activities, including user management, employee information, leave management, recruitment, and other HR operations.

This project focuses on manually testing the Admin module, particularly the User Management functionality. The testing will verify whether administrators can search, add, edit, and manage system users correctly.

The project also aims to identify defects, validate mandatory field validations, and verify that the application behaves as expected under different test conditions.

2. Testing Objectives

The main objectives of this testing project are:

1. To verify that the Admin module functions correctly.

2. To validate the User Management functionality, including adding, editing, searching, and managing system users.
3. To verify mandatory field validations when users submit forms with missing information.
4. To verify that search filters return accurate results based on the selected criteria.
5. To validate that the application displays appropriate validation messages for invalid inputs.
6. To verify that user account status and role information are managed correctly.
7. To identify, document, and report defects found during testing.
8. To ensure that the application behaves as expected under different test scenarios.

3. Application Under Test

Application Name: OrangeHRM

Application Type: Human Resource Management System (HRMS)

Application URL: https://opensource-demo.orangehrmlive.com/

Application Description: OrangeHRM is a web-based Human Resource Management System that helps organizations manage employee-related activities and HR operations. The application provides various modules, including Admin, PIM, Leave, Time, Recruitment, Performance, and other HR-related functionalities.

Module Selected for Testing: Admin

Sub-Module Selected: User Management

Functionalities Selected for Testing:

1. View System Users
2. Search Users using Username
3. Filter Users by User Role
4. Filter Users by Employee Name
5. Filter Users by Account Status
6. Reset Search Filters
7. Add New Users
8. Edit Existing Users
9. Validate Mandatory Fields
10. Verify Password and Confirm Password Validation

Testing Focus:

The testing focuses on verifying the functionality of the Admin module, particularly User Management. It includes positive testing, negative testing, search functionality, form validation, and user account management.

4. Scope of Testing

The scope of this project is limited to manually testing the Admin module, specifically the User Management functionality of the OrangeHRM application.

The testing will cover the following functionalities:

4.1 In-Scope Features

1. **View System Users:** Verify that the system displays the list of existing users with their Username, User Role, Employee Name, and Status.
2. **Search Functionality:** Verify that users can be searched using the Username field.
3. **User Role Filter:** Verify that users can be filtered based on available user roles, such as Admin and ESS.
4. **Employee Name Filter:** Verify that the Employee Name field displays matching suggestions and allows users to search by employee name.
5. **Status Filter:** Verify that users can be filtered based on account status (Enabled or Disabled).
6. **Reset Functionality:** Verify that clicking Reset clears the search fields and restores the default user list.
7. **Add User:** Verify that administrators can open the Add User form and enter the required user information.
8. **Edit User:** Verify that existing user information can be viewed and updated.
9. **Mandatory Field Validation:** Verify that the application displays appropriate validation messages when required fields are left empty.
10. **Password Validation:** Verify Password and Confirm Password mandatory field validation and password mismatch validation.

4.2 Testing Coverage

The project will include:

- Positive Testing
- Negative Testing
- Functional Testing
- UI Testing
- Field Validation Testing
- Basic Usability Testing

The testing will be performed manually using the available OrangeHRM demo application.

4.3 Scope Limitation

Testing will focus only on the Admin module's User Management functionality. Other OrangeHRM modules and their functionalities are not included in this project's testing scope.

5. Out of Scope

The following functionalities and testing activities are excluded from the scope of this project. Testing will be limited to the Admin module's User Management functionality.

5.1 Out-of-Scope Modules

The following OrangeHRM modules will not be tested:

1. **PIM:** Employee personal information and employee record management.
2. **Leave:** Leave application, approval, and leave balance management.
3. **Time:** Attendance, timesheets, and time tracking.
4. **Recruitment:** Job vacancies, candidate applications, and recruitment processes.
5. **Performance:** Employee performance reviews and evaluations.
6. **Dashboard:** Dashboard widgets and information display.
7. **Directory:** Employee directory and employee search.
8. **Maintenance:** Data management and maintenance operations.
9. **Claim:** Employee expense claims and reimbursements.
10. **Buzz:** Social communication and employee posts.

5.2 Out-of-Scope Testing Activities

The following testing activities are also excluded:

1. **Performance Testing:** Load testing, stress testing, and response-time measurement.
2. **Security Testing:** Penetration testing, vulnerability assessment, and security auditing.
3. **Automation Testing:** Automated test execution using Selenium, Playwright, or other automation tools.
4. **Compatibility Testing:** Extensive testing across multiple browsers, operating systems, and devices.
5. **API Testing:** Backend API validation and API automation.
6. **Database Testing:** Direct database validation and backend data verification.

5.3 Scope Limitation

This project focuses exclusively on functional and basic UI testing of the Admin module's User Management functionality. Any issues or defects related to excluded modules and testing activities will not be considered part of this project's testing scope.

6. Testing Types

The following types of testing will be performed to verify the functionality, usability, and reliability of the Admin module's User Management functionality.

6.1 Functional Testing

Functional testing will be performed to verify whether the application behaves according to the expected requirements.

Testing activities include:

- Verify that the System Users list is displayed correctly.
- Verify user search functionality using Username.
- Verify filtering by User Role, Employee Name, and Status.
- Verify Reset functionality.
- Verify Add User functionality.
- Verify Edit User functionality.
- Verify mandatory field validations.
- Verify Password and Confirm Password validation.

6.2 UI Testing

UI testing will be performed to verify that the user interface elements are displayed correctly and function as expected.

Testing activities include:

- Verify the visibility of buttons, labels, text fields, and dropdowns.
- Verify the alignment and positioning of form elements.
- Verify that mandatory fields are marked with an asterisk (*).
- Verify that validation messages are displayed clearly.
- Verify that the Search, Reset, Add, Edit, and Save buttons are displayed correctly.

6.3 Positive Testing

Positive testing will be performed by entering valid inputs to verify that the application accepts correct data and performs the expected operations.

Testing activities include:

- Search for users using a valid username.
- Filter users using valid User Role and Status values.
- Add a user with all valid mandatory information.
- Edit an existing user with valid information.
- Enter matching Password and Confirm Password values.

6.4 Negative Testing

Negative testing will be performed by entering invalid, incorrect, or incomplete inputs to verify that the application handles them properly.

Testing activities include:

- Click Save without entering mandatory information.
- Submit the form without selecting a User Role.
- Submit the form without selecting a Status.
- Leave the Username field empty.
- Leave the Password field empty.
- Enter different values in Password and Confirm Password fields.
- Verify that appropriate validation messages are displayed.

6.5 Validation Testing

Validation testing will be performed to verify that the application correctly validates mandatory fields and user inputs.

Testing activities include:

- Verify mandatory field validation.
- Verify that validation messages disappear after entering valid information.
- Verify that Password and Confirm Password fields accept matching values.
- Verify that appropriate error messages appear when invalid or incomplete information is entered.

6.6 Regression Testing

Regression testing will be performed to ensure that existing User Management functionalities continue to work correctly after changes or updates.

Testing activities include:

- Verify that user search functionality continues to work.
- Verify that existing filters work correctly.
- Verify that Add and Edit User functionalities remain unaffected.
- Verify that mandatory field validations continue to work correctly.

Note: This project focuses on functional, UI, positive, negative, validation, and basic regression testing of the Admin module's User Management functionality.

7. Test Environment

Testing will be performed using a web-based testing environment. The OrangeHRM Open Source Demo application will be accessed through a desktop web browser.

7.1 Hardware Environment

Component	Configuration
Device	Laptop
Processor	Intel(R) Core(TM) i5 - 10310U
RAM	16GB
Internet Connection	Personal Mobile Hotspot

7.2 Software Environment

Component	Configuration
Operating System	Microsoft Windows 11 64-bit
Browser	Google Chrome
Application Type	Web-Based Application
Testing Type	Manual Testing

7.3 Application Environment

Component	Details
Application Name	OrangeHRM

Application URL	https://opensource-demo.orangehrmlive.com/
Module	Admin
Sub-Module	User Management
Environment	Public Demo Environment
User Role	Admin

7.4 Browser Configuration

- Browser used: Google Chrome.
- Testing will be performed using the desktop browser.
- Browser zoom will be maintained at 100% where possible.
- The application will be accessed using an active internet connection.
- Browser cache and cookies may be cleared when required for specific test scenarios.

7.5 Test Data

The following test data will be used during testing:

- Existing system user records available in the OrangeHRM demo application.
- Valid and invalid usernames.
- Available employee names.
- User roles such as Admin and ESS.
- Account statuses such as Enabled and Disabled.
- Valid and invalid password combinations.

Note: The application is a publicly available demo environment. Test data and application records may change due to activities performed by other users or periodic application resets.

8. Test Approach

The testing approach for this project will follow a structured manual testing process. Testing will focus on verifying the functionality of the Admin module, particularly the User Management sub-module.

The following activities will be performed during testing:

8.1 Application Understanding

- Explore the OrangeHRM application and understand its navigation and functionalities.
- Identify the Admin module and its User Management sub-module.
- Understand the available features, input fields, dropdowns, buttons, and user operations.
- Document the observations in the Application Study document.

8.2 Test Scenario Identification

- Identify test scenarios based on the available User Management functionalities.
- Cover positive and negative scenarios.
- Identify scenarios related to search, filtering, adding users, editing users, and mandatory field validation.

8.3 Test Case Preparation

- Prepare detailed test cases for each identified scenario.
- Include Test Case ID, Test Scenario, Preconditions, Test Steps, Test Data, Expected Result, and Actual Result.
- Ensure that positive and negative test conditions are covered.

8.4 Test Data Preparation

- Identify suitable test data for executing test cases.
- Use existing employee records and available user roles.
- Prepare valid and invalid input values for username, employee name, and password fields.
- Use available account statuses such as Enabled and Disabled.

8.5 Test Case Execution

- Execute test cases manually using the OrangeHRM application.
- Follow the documented test steps.
- Enter the required test data and perform the specified actions.
- Observe the application's behavior and compare it with the expected results.

8.6 Actual Result Verification

- Compare the actual application behavior with the expected results.
- Mark test cases as Pass or Fail based on the observed results.
- Record execution observations and capture screenshots as supporting evidence.

8.7 Defect Identification and Reporting

- Identify defects whenever the actual result differs from the expected result.

- Document defects with a unique Bug ID, Summary, Steps to Reproduce, Expected Result, Actual Result, Severity, and Priority.
- Attach screenshots wherever applicable.
- Record and track identified defects.

8.8 Retesting and Regression Testing

- Retest reported defects after the corresponding fixes become available.
- Verify whether the reported defects have been resolved.
- Perform basic regression testing to ensure that existing User Management functionalities continue to work correctly after changes.

8.9 Test Documentation

- Maintain the Application Study document.
- Maintain the Test Plan and Test Scenarios.
- Maintain detailed Test Cases and execution results.
- Maintain defect reports and supporting screenshots.
- Prepare a Test Summary Report after completing the planned testing activities.

Note: Testing will be performed manually using the OrangeHRM public demo application. Test execution results and defects will be documented based on actual observations.

9. Entry Criteria

The following conditions must be fulfilled before starting the formal test execution of the Admin module's User Management functionality.

1. **Application Availability:** The OrangeHRM demo application must be accessible and available for testing.
2. **Application Access:** Valid login credentials must be available to access the application.
3. **Application Understanding:** The tester must understand the Admin module and its User Management functionalities.
4. **Test Plan Approval:** The Test Plan must be prepared and reviewed before starting test execution.
5. **Test Scenario Preparation:** All required test scenarios must be identified and documented.
6. **Test Case Preparation:** Detailed test cases must be prepared with test steps, test data, and expected results.
7. **Test Data Availability:** Required valid and invalid test data must be available for executing test cases.

8. **Test Environment Readiness:** The testing environment, including the operating system, browser, and internet connection, must be ready.
9. **Application Stability:** The application must be sufficiently stable to perform the planned testing activities.
10. **Testing Scope Confirmation:** The testing scope and functionalities to be tested must be clearly identified.

Testing will begin only when the required entry conditions are satisfied.

10. Exit Criteria

Testing of the OrangeHRM Admin – User Management module will be considered complete when the following conditions are satisfied:

1. All planned test cases within the defined testing scope have been executed.
2. All critical and high-priority test cases have been executed successfully.
3. Actual results have been compared with expected results.
4. All identified defects have been documented with proper steps to reproduce.
5. Critical and high-severity defects have been resolved and retested, or their status has been clearly documented.
6. Failed test cases have been reviewed and their results have been recorded.
7. Retesting has been performed for resolved defects.
8. Relevant regression testing has been completed after changes, where applicable.
9. Test execution results have been documented.
10. A final test summary report has been prepared.

Note: If any test cases remain unexecuted or any defects remain unresolved, they must be clearly documented in the final test summary report.

11. Test Deliverables

The following test deliverables will be prepared during the OrangeHRM Admin – User Management manual testing project:

No.	Test Deliverable	Description
1	Application Study Document	Contains application overview, module details, user roles, exploration notes, and business workflows.
2	Test Plan Document	Defines testing objectives, scope, approach, testing types, environment, entry criteria, and exit criteria.

3	Test Scenarios	Contains high-level test conditions identified for the User Management module.
4	Test Cases	Contains detailed test steps, test data, expected results, and actual results.
5	Test Data	Contains the sample data required to execute test cases.
6	Defect/Bug Report	Documents identified defects with steps to reproduce, expected results, actual results, severity, and priority.
7	Test Execution Report	Records test case execution status, such as Pass, Fail, Blocked, or Not Executed.
8	Test Summary Report	Provides an overview of testing activities, execution results, defect statistics, and overall testing status.

Note: These deliverables will be prepared and updated throughout the project. Only documents and reports actually completed will be included in the final project submission.

12. Roles and Responsibilities

This is an individual manual testing project. The tester is responsible for performing all planned testing activities for the OrangeHRM Admin – User Management module.

Role: Manual QA Tester

Responsibilities:

1. Understand the OrangeHRM application and its User Management functionality.
2. Identify test scenarios based on application requirements and observed behavior.
3. Prepare detailed test cases with test steps, test data, and expected results.
4. Execute test cases manually and compare actual results with expected results.
5. Perform positive, negative, functional, UI, and validation testing.
6. Identify, document, and report defects with proper reproduction steps.
7. Capture screenshots as supporting evidence for reported defects.
8. Perform retesting after defects are fixed, where applicable.
9. Perform relevant regression testing to verify existing functionality.
10. Maintain test documentation and prepare test execution and summary reports.

Note: As this is an individual practice project, all testing responsibilities are handled by the tester.

13. Risks and Mitigation

The following risks have been identified for the OrangeHRM Admin – User Management manual testing project, along with their mitigation strategies.

No.	Risk	Potential Impact	Mitigation Strategy
1	Demo application downtime	Testing activities may be interrupted if the application is unavailable.	Verify application availability before starting testing and resume testing when the application becomes accessible.
2	Shared test environment	Other users may modify test data, which can affect test execution results.	Avoid relying on previously created records and verify test data before executing test cases.
3	Test data changes	Existing user records may be modified or removed, affecting test results.	Maintain separate test data records and verify the data before execution.
4	Limited application access	Some functionalities may not be accessible with the available user account.	Perform testing only on accessible functionalities and document any access limitations.
5	Unstable application behavior	Unexpected application responses may affect test execution.	Repeat the test when appropriate and document inconsistent behavior with screenshots.
6	Limited testing scope	Testing only the Admin – User Management module may leave other modules untested.	Clearly define the testing scope and document excluded modules.
7	Browser compatibility issues	Application behavior may differ across browsers.	Perform testing in the selected browser and document any browser-specific issues observed.
8	Accidental modification of shared data	Changes to shared demo records may affect other users.	Avoid modifying or deleting existing records unnecessarily. Use test-specific records where possible.

Note: These risks and mitigation strategies are identified based on the planned testing environment. Any additional risks observed during testing will be documented accordingly.

14. Test Plan Approval

This Test Plan document has been prepared to define the testing approach, scope, objectives, activities, and responsibilities for the OrangeHRM Admin – User Management manual testing project.

The document is prepared for individual learning and portfolio purposes.

Test Plan Details:

Field	**Details**
Project Name	OrangeHRM – Admin User Management
Document Name	Test Plan
Document Version	1
Prepared By	Individual Manual QA Tester
Review Status	Self-Reviewed
Approval Status	Prepared for Portfolio Project

Approval Note:

This document is self-reviewed and maintained by the tester. No external client or organizational approval is applicable because this is an individual practice project.
